# AFTERCARE

1. Keep the area clean: Keeping the treated area clean is essential to help prevent infection and ensure proper healing. Gently clean the area with mild soap and water every morning and evening.
2. Avoid picking or scratching: Do not pick or scratch at the treated area, as this can lead to infection and may cause the pigment to fade or become uneven.
3. Avoid direct sun exposure: Avoid exposing the treated area to direct sunlight or tanning beds for at least two weeks after the procedure. Sun exposure can cause the pigment to fade or become discolored.
4. Avoid strenuous activities: Avoid activities that may cause sweating or irritation to the treated area, such as exercise or hot showers, for at least a few days after the procedure.
5. Avoid makeup: Avoid wearing makeup on the treated area for at least a few days after the procedure. If you must wear makeup, use a gentle, oil-free formula and avoid rubbing or scratching the area.

**IT IS IMPORTANT TO FOLLOW THE SPECIFIC AFTERCARE INSTRUCTIONS PROVIDED TO ENSURE THE BEST POSSIBLE HEALING AND RESULTS. IF YOU HAVE ANY QUESTIONS OR CONCERNS ABOUT THE AFTERCARE PROCESS, BE SURE TO ASK FOR MORE GUIDANCE.**
